Staff Report - Public Works Department

Measure F-14 Program Updates

RECOMMENDATION:

Committee receive and file staff report on Measure F-14 program updates.

DISCUSSION:

The City Council recently adopted the FY19/20 and FY20/21 Budgets that began on July 1, 2019. As part of this two-year budget cycle process, the 5-Year Capital Improvement Program (CIP) is updated to update costs and scope to planned roadway projects, and selection of new roadway sections for projects in Years 4 (FY22/23) and 5 (FY23/24) of the CIP.

Sales Tax Measure F-14 is included in a separate budget section that includes the roadway projects by fiscal year and a ledger summarizing the project budgets and costs. This budget section (Section F) is attached to this report for review and will be discussed at the July 18, 2019 meeting.

Additional updates on active projects will be also discussed at the meeting.

FISCAL IMPACT:

None.

DESCRIPTION

This fund is a sub-account of the General Fund and is used to account for projects with special funding received from Sales Tax Measure F-14 approved by voters in November 2014. The sales tax measure increases the City sales tax rate by 0.5% effective April 1, 2015, and includes a 9 member Citizen Oversight committee, an annual road report, and a 12 year sunset clause.

When voters approved Sales Tax Measure F-14, they also approved Measure E-14, recommending the sales tax revenue be used for the purpose of repairing and maintaining neighborhood roads and other roadways.

Road repair projects are typically larger road projects that repair or rehabilitate the road. *Road maintenance* projects are also typically large projects that are designed to preserve those roads that are in good or fair condition. *Neighborhood roads and other roadways* includes residential roads serving those lots directly fronting the road and not through-traffic, collector roads funneling local traffic from residential roads to arterial roads, and arterial roads carrying the largest amount of traffic.

Other costs may also include drainage repairs necessary to preserve/protect/repair the surface of the road, bridge repairs to maintain the asphalt/pavement on the bridge structure excluding maintenance of the structure itself, consultant and City staff time spent working directly on the project, and Federal American with Disabilities Act requirements for any deficient disabled access improvements within the project area. Not included and not funded with this general sales tax increase is routine road maintenance, e.g. minor pothole repairs, vegetation control, shoulder control, street staffing, road widening, bikeways, new roads, roundabouts, general administration and overhead.

The Public Works department develops a prioritization plan for the work using a tool known as the "Critical Point Management" methodology. All of the City maintained roads have been inspected and entered into a program that evaluated the condition of each to help determine how resources can be best spent to prevent street pavements from dropping into a condition that will trigger more expensive maintenance, rehabilitation, and reconstruction. This process provides the lowest life-cycle costs for the roadway system to maximize the overall pavement condition.

2019 Rehabilitation Project (West/Central): \$2,525,300

3.17 miles

This project is scheduled for construction during 2019 and is expected to be heavy or light rehabilitation projects designed to improve fair to bad pavement conditions for entire roadway segments, such as overlays and cold-in-place recycling. During the engineering phase, it may be determined that a different treatment would be more appropriate. While the expected treatment method may change, the following road segments will be repaired.

2021 Resurfacing Project (East/South): \$300,000

2.48 miles

This project is scheduled for construction during 2021 and is expected to be heavy or light resurfacing projects designed to preserve good pavement conditions for entire roadway segments. Resurfacing for these projects are strategically-timed treatments to the entire pavement surface, such as seal coats and slurry seals, beyond the routine potholing and patching that City staff perform. During the engineering phase, it may be determined that a different treatment would be more appropriate. While the expected treatment method may change, the following road segments will be repaired.
